

ABSTRACT OF THE DISCLOSURE

A stand-alone printing apparatus for transferring one or more digital photographs captured by a digital device to a printable medium. The printing apparatus includes an input member for receiving the digital photographs from a source and image processing for generating an image corresponding to each of the digital photographs. A graphical user interface with video display is integrated within the printing apparatus and includes a plurality of different states in which to preview the digital photograph images, select photographs for printing, and preview a printed page of selected photographs.
